ISO 27001 INFORMATION SECURITY RISK ASSESSMENT

General

The ISO 27001 standard mandates a risk-based approach, incorporating a comprehensive risk assessment against all in-scope controls within your Statement of Applicability.

ISO provides guidance by way of a framework in its ISO 27005 standard, offering “what” needs to be done, not “how.” As a result, many organizations without the internal expertise remain challenged to succeed.

Risk Assessment

CIMA helps clients independently and collaboratively perform information security risk assessments on the controls documented in its Statement of Applicability using the client’s documented information security risk assessment process.

If you don’t have a process, we can help build one for your organization.

Information Security Risk Management

Following the completion of the risk assessment, organizations must complete the full risk management process by identify risk treatment options, and presenting to the appropriate management authority and documenting the decision.

CIMA facilitates this process for clients helping them through it the first time, as well documenting the process, where absent.

What You Get

At the end of the Risk Assessment process you will receive the documented qualification of risk, risk treatment options, and your management’s final decision for integration into your ISO 27001 mandated mitigation plan.
