ISO 27001 KICK-STARTER "A" PACKAGE

ISO 27001 Team Training

We begin our one-week Kick-starter package with our 3.5-day Certified ISO 27001 Lead Implementer Course to ensure your team thoroughly understands the end-to-end process associated with designing, developing, rolling-out, and maintaining an ISO 27001-based information security program.

ISO 27001 Program Scope Workshop

Many clients find it challenging to define the scope of their ISO 27001-based information security management system (ISMS). Simply put, the "Scope" is a statement of the ISMS' boundaries. We provide a half-day facilitated workshop to bring your team together and collaboratively work through the dimensions of the ISMS' boundaries. The output is a documented ISMS scope statement. This document is not only required for certification, but provides essential focus for your team, and is included on the certification certificate issued to your company.

High-level ISO 27001 Project Planning

Our Kick-starter plan includes a half-day workshop with your team to begin the planning process, and follow-up documentation of the outcome. Guided by a CIMA facilitator and our 5-phased ISO 27001 methodology, we will work with your team to build your high-level project plan.

What You Get

At the end of the Kick-starter week, your organization will have the requisite knowledge, focus and high-level plan to begin the journey and succeed at your ISO 27001 initiative.
