ISO 27001 PROCESS AND PROCEDURES

General

The governance framework establishes the basis from which all governance are developed in an interrelated and hierarchical manner. This is established through the design of mandating statements in the higher level document.

For organizations seeking an expedited delivery, we have some and continue to develop other pre-built process and procedures document that we can use to assist.

Process Development

To build processes, we take an interactive approach by performing interviews and facilitating workshops with your process stakeholders to understand your organization's unique needs, and begin the development process based on it. For pre-built processes, we take the same approach, but less time in development as we're negating the weeks of building from the ground up.

Standard Operating Procedural Development

To ensure your operational controls are managed in a consistent manner, and meet the expectations of the ISO 27001 standard, we help organizations build operational procedure for control systems, as well as to support management processes.

What You Get

At the end of the Process and Procedural Development activity, you will receive a series of documents mandated by your governance framework and the ISO 27001 standard. We also develop instructor led and e-learning packages to help ensure the successful transition of your new process or procedure into production, and to help bring new employees and contractors up to speed quickly, and ensure their compliance through proactive education.
