## SECURITY METRICS AS A SERVICE

### General

Measuring and monitoring the efficiency and effectiveness of information security controls and the program's overall performance not only makes good sense, but is mandated by the ISO 27001 standard.

Given many programs are understaffed and under-budgeted, it is no wonder why performance management as an ongoing functional activity is limited to larger companies and those that have achieved certification.

Organizations need to find creative ways to bridge this gap and ensure compliance to meet certification criteria in order to satisfy client contract obligations of ISO 27001 certification.

### SecurityMetrics aaS

To fill this void, CIMA offers clients the ability to maintain their information security performance management program after the implementation project as been closed.

An assigned expert will work with your control owners or a single point of contact to collect, collate and analyze control level performance data.

On a monthly basis, a report will be generated and distributed to the client.

Based on the terms of the contract, our expert may also support the presentation of the metrics to client management, auditors and customers.

### What You Get

An information security performance management specialist who will provide program level services focused on assessing the performance of the information security program, and documented reports.
